

A real NESTFUL trace that looks safe to compile

John makes 50 dollars a week, then 60: what is the percentage increase?

`subtract(60, 50) → divide(result, 50) → multiply(result, 100)`

Every later argument is grounded in the entry values or the prior result.

Naive rule

`recurs + replays → ship`

Exact sequence support: 33 records

Replay: 24 pass / 12 abstain / 0 wrong

Tempting conclusion: ship it.

GAC's evidence gate

best candidate family: 26 groups

zero-violation requirement: 92 groups

26 < 92 → no certificate

RETIRE → baseline fallback
