

Two cohorts expose different substitution failures

Expanded issue #4420 — multi-node metric evaluation

record → labels → comments(limit=100)

Earlier artifact: issue #6602

recur + replay → ship

45/45 tool replays

4 requests → 1

tool contract passes

Downstream miss on issue #6602

expected: Markdown link

compiled: link text only

tool contract = pass

answer contract = fail

Expanded compiler: stop where provenance ends

full candidate: RETIRE

comments.limit: ungroundable

no consistent expression

emit record → labels

leave comments + rendering with the agent

92/92 at $\alpha=.05$ · upper bound 0.0498

Earlier continuation check

detects comment_evidence:mismatch

checked render: 18/18 pass

provider-free mechanism check;

not live safety evidence
